

## 300 mA 36 V Input Regulator for Automotive Applications

NO. EC-300-221111

### OUTLINE

The R1511x is a CMOS-based high-voltage resistant and fast response voltage regulator that provides the minimum 300mA of output current. Internally, R1511x consists of an Output Short-circuit Protection Circuit, an Over-current Protection Circuit, and a Thermal Shutdown Circuit in addition to the basic regulator circuits. The operating temperature range is between  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ , and the maximum input voltage is 36V. All these features allow the R1511x to become an ideal power source for car accessories and ECUs.

R1511x is available in R1511xxxxB with the fixed output voltage type, and R1511x001C with adjustable output voltage type with external resistors. The output voltage accuracy is  $\pm 1.0\%$ .

R1511x is available in two types of packages for ultra high wattage: HSOP-6J and TO-252-5-P2.

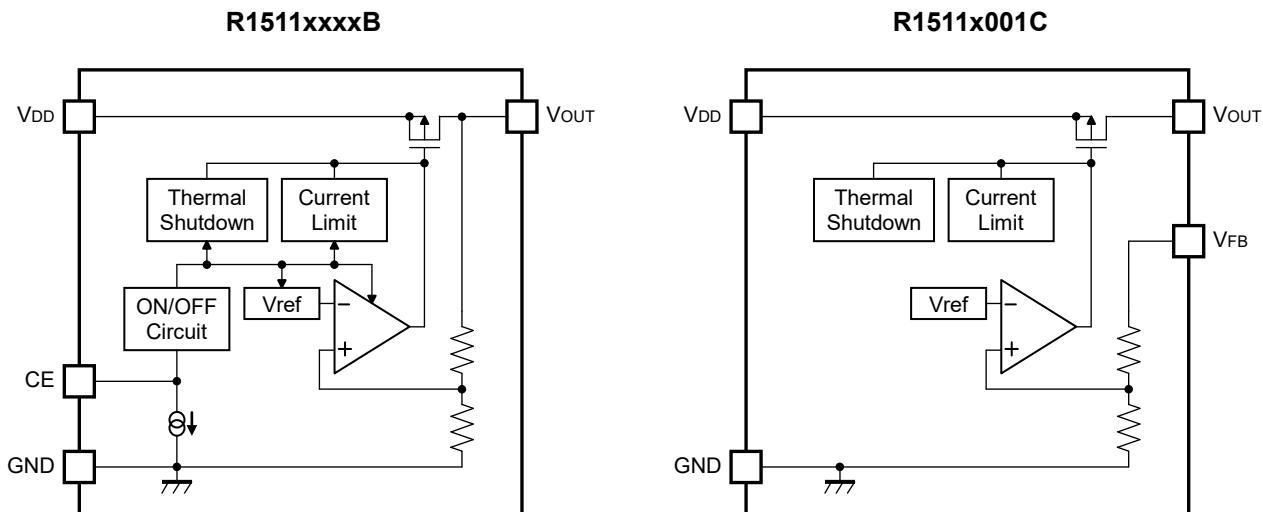

### FEATURES

- Input Voltage Range (Maximum Rating) ..... 3.5V to 36V (50 V)
- Supply Current ..... Typ. 100 $\mu\text{A}$
- Standby Current ..... Typ. 0.1 $\mu\text{A}$  (R1511xxxxB)
- Output Voltage Range ..... R1511xxxxB: 3.0 V to 9.0 V (0.1 V step)  
R1511x001C: 3.0V to 12.0V (Adjustable with external resistor)
- Output Voltage Accuracy ..... R1511xxxxB:  $\pm 1.0\%$  ( $T_a=25^{\circ}\text{C}$ )
- Feedback Voltage ..... R1511x001C: 3.0V  $\pm 1.0\%$  ( $T_a=25^{\circ}\text{C}$ )
- Output Voltage Temperature-Drift Coefficient ..... Typ.  $\pm 60\text{ppm}/^{\circ}\text{C}$
- Line Regulation ..... Typ. 0.01%/V ( $V_{DD}=V_{OUT}+0.5\text{V}$  to 36V)
- Dropout Voltage ..... Typ. 0.64V ( $I_{OUT}=300\text{mA}$ ,  $V_{OUT}=5.0\text{V}$ )
- Package Option ..... HSOP-6J, TO-252-5-P2
- Built-in Output Short-circuit Protection Circuit ..... Typ. 50mA
- Built-in Over-current Protection Circuit ..... Typ. 450mA
- Built-in Thermal Shutdown Circuit ..... Thermal Shutdown Temperature: Typ.  $160^{\circ}\text{C}$
- Operating Temperature Range .....  $-40$  to  $125^{\circ}\text{C}$
- Ripple Rejection ..... Typ. 65dB (1kHz)
- Ceramic capacitors are recommended to be used with this IC  
.....  $C_{IN}=1.0\mu\text{F}$  or more,  $C_{OUT}=6.8\mu\text{F}$  or more

### APPLICATIONS

- Power source for accessories such as car audios, car navigation systems, and ETC systems
- Power source for ECUs such as EV inverter and battery charge control unit

## BLOCK DIAGRAMS

## SELECTION GUIDE

The output voltage, version and the package type for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1511Sxxx*-E2-#E	HSOP-6J	1,000 pcs	Yes	Yes
R1511Jxxx*-T1-#E	TO-252-5-P2	3,000 pcs	Yes	Yes

xxx : Specify the set output voltage ( $V_{SET}$ )  
 R1511xxxxB: 3.0 V (030) to 9.0 V (090) in 0.1 V step  
 R1511x001C: Only (001)

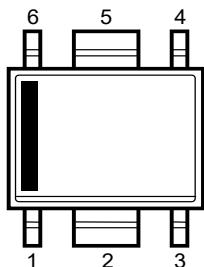

\* : Specify the version  
 (B): Fixed output and Built-in Chip Enable (Active-high)  
 (C): Adjustable output

# : Specify Automotive Class Code

	Operating Temperature Range	Guaranteed Specs Temperature Range	Screening
A	-40°C to 125°C	25°C	High Temperature
K	-40°C to 125°C	-40°C to 125°C	High and Low Temperature

## PIN DESCRIPTIONS

### • HSOP-6J

### • TO-252-5-P2

### HSOP-6J

Pin No.	Symbol	Description	
1	$V_{DD}$	Input Pin	
2	$GND^{*1}$	Ground Pin	
3	$GND^{*1}$	Ground Pin	
4	CE	$R1511SxxxB$	Chip Enable Pin (Active-high)
	$V_{FB}$	$R1511S001C$	Feed Back Pin
5	$GND^{*1}$	Ground Pin	
6	$V_{OUT}$	Output Pin	

\*1 The GND pin must be wired together when it is mounted on board.

### TO-252-5-P2

Pin No.	Symbol	Description	
1	$V_{DD}$	Input Pin	
2	$GND^{*2}$	Ground Pin	
3	$GND^{*2}$	Ground Pin	
4	CE	$R1511JxxxB$	Chip Enable Pin (Active-high)
	$V_{FB}$	$R1511J001C$	Feed Back Pin
5	$V_{OUT}$	Output Pin	

\*2 The GND pin must be wired together when it is mounted on board.

\*3 The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left open.

## ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating		Unit
$V_{IN}$	Input Voltage	-0.3 to 50		V
$V_{IN}$	Peak Input Voltage <sup>*1</sup>	60		V
$V_{CE}$	Input Voltage (CE Pin)	-0.3 to 50		V
$V_{FB}$	Input Voltage ( $V_{FB}$ Pin)	-0.3 to 50		V
$V_{OUT}$	Output Voltage	-0.3 to $V_{IN}+0.3 \leq 50$		V
$I_{OUT}$	Output Current	450		mA
$P_D$	Power Dissipation (HSOP-6J) <sup>*2</sup>	JEDEC STD. 51-7	3400	mW
	Power Dissipation (TO-252-5-P2) <sup>*2</sup>	JEDEC STD. 51-7	4800	
$T_j$	Operating Junction Temperature Range	-40 to 150		°C
$T_{STG}$	Storage Temperature Range	-55 to 150		°C

<sup>\*1</sup> Duration time: 200ms

<sup>\*2</sup> Refer to PACKAGE INFORMATION for detailed information.

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the lifetime and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings are not assured.

## RECOMMENDED OPERATING CONDITIONS

Symbol	Item	Rating	Unit
$V_{IN}$	Input Voltage	3.5 to 36	V
$T_a$	Operating Temperature Range	-40 to 125	°C

### RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

## ELECTRICAL CHARACTERISTICS

$C_{IN}=1.0\mu F$ ,  $C_{OUT}=6.8\mu F$ , unless otherwise noted.

The specifications surrounded by  are guaranteed by design engineering at  $-40^{\circ}C \leq Ta \leq 125^{\circ}C$ .

## TYPICAL APPLICATIONS

## TECHNICAL NOTES

### PCB Layout and GND Wiring

Ensure the  $V_{DD}$  and GND lines are sufficiently robust. If their impedance is too high, noise pickup or unstable operation may result. Connect a  $C_{IN}$  capacitor with  $1.0\mu F$  or more value between the  $V_{DD}$  and GND pins, and as close as possible to the pins. Likewise, connect a  $C_{OUT}$  capacitor with suitable values between the  $V_{OUT}$  and GND pins, and as close as possible to the pins (refer to the Typical Application above).

In the case of using HSOP-6J package, make sure to wire No. 2, No. 3, and No. 5 pins to the GND plane. Also, in the case of using TO-252-5-P2 package, make sure to wire No. 2 and No. 3 pins to the GND plane.

### Phase Compensation

In the R1511x, phase compensation is provided to secure stable operation even when the load current is varied. For this purpose, make sure to use a  $C_{OUT}$  capacitor.

In case of using a tantalum type capacitor and the ESR (Equivalent Series Resistance) value of the capacitor is large, the output might be unstable. Evaluate the circuit including consideration of frequency characteristics.

Depending on the capacitor size, manufacturer, and part number, the bias characteristics and temperature characteristics are different. Evaluate the circuit taking actual characteristics into account.

## Thermal Shutdown

R1511x contains a thermal shutdown circuit, which stops regulator operation if the junction temperature of R1511x becomes higher than 160°C (Typ.). Additionally, if the junction temperature after the regulator being stopped decreases to a level below 135°C (Typ.), it restarts regulator operation. As a result the operation of the thermal shutdown circuit causes the regulator repeatedly to turn off and on until the causes of overheating are removed. As a consequence a pulse shaped output voltage occurs.

## Adjustable Output Voltage Setting (R1511x001C)

The output voltage of R1511x001C can be adjusted by using the external divider resistors (R1, R2). By using the following equation, the output voltage ( $V_{OUT}$ ) can be determined. The voltage which is fixed inside the IC is described as  $V_{FB}$ .

$$V_{OUT} = V_{FB} \times ((R1 + R2) / R2)$$

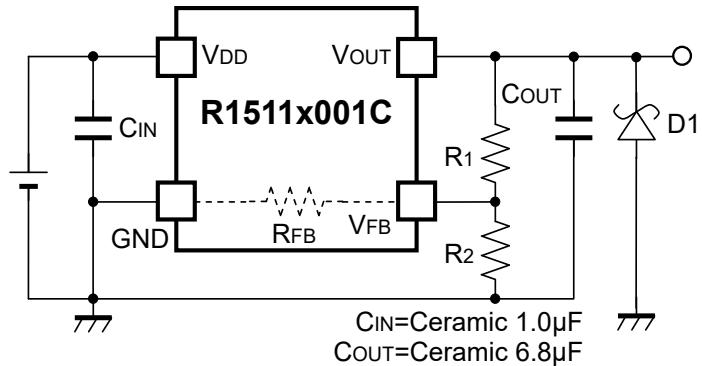

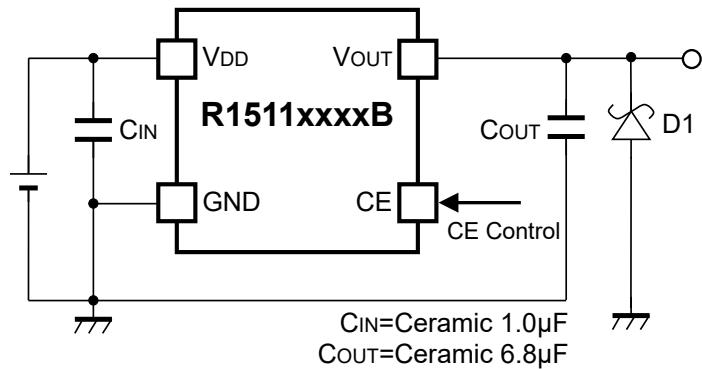

Recommended Range:  $3.0 \text{ V} \leq V_{OUT} \leq 12.0 \text{ V}$

$$V_{FB} = 3.0 \text{ V}$$

$R_{FB}$  of the R1511x001C is approximately Min. 1.0 MΩ (guaranteed by design). For better accuracy, setting  $R1 \ll R_{FB}$  reduces errors. The resistance value for R2 should be set to 39 kΩ or lower. It is easily affected by noises when setting the value of R1 and R2 larger, which makes the impedance of  $V_{FB}$  pin larger.

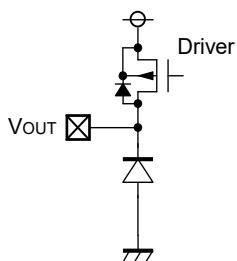

$R_{IC}$  could be affected by the temperature, therefore evaluate the circuit taking the actual conditions of use into account when deciding the resistance values for R1 and R2.

## TYPICAL APPLICATION FOR IC CHIP BREAKDOWN PREVENTION

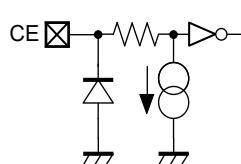

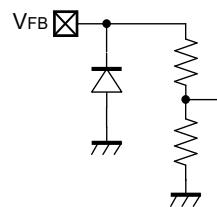

When a sudden surge of electrical current travels along the V<sub>OUT</sub> pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C<sub>OUT</sub>) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D<sub>1</sub>) between the V<sub>OUT</sub> pin and GND has the effect of preventing damage to them.

## PACKAGE INFORMATION

### POWER DISSIPATION (HSOP-6J)

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

#### Measurement Conditions

Item	Measurement Conditions
Environment	Mounting on Board (Wind Velocity = 0 m/s)
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square
Through-holes	Ø 0.3 mm × 28 pcs

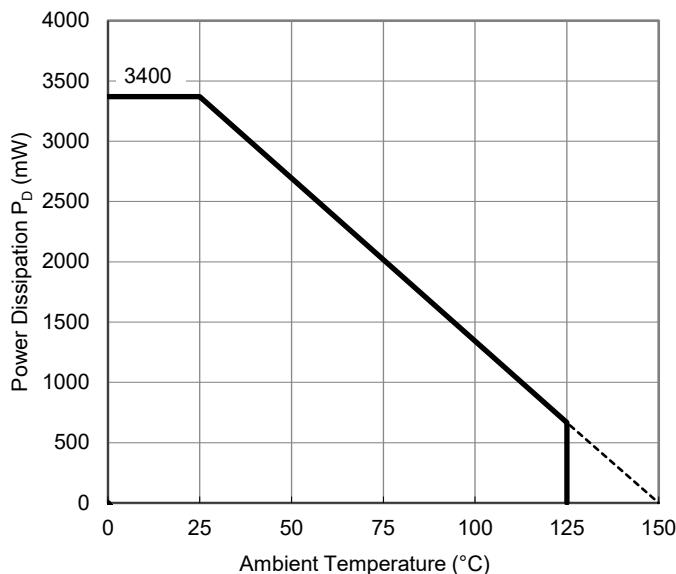

#### Measurement Result

(Ta = 25°C, Tjmax = 150°C)

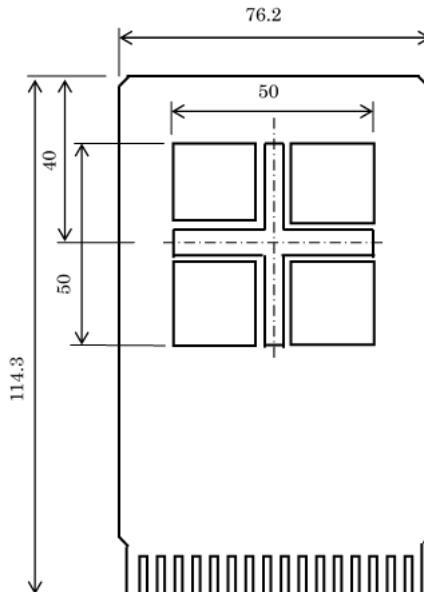

Item	Measurement Result
Power Dissipation	3400 mW
Thermal Resistance ( $\theta_{ja}$ )	$\theta_{ja} = 37^\circ\text{C}/\text{W}$
Thermal Characterization Parameter ( $\psi_{jt}$ )	$\psi_{jt} = 7^\circ\text{C}/\text{W}$

$\theta_{ja}$ : Junction-to-Ambient Thermal Resistance

$\psi_{jt}$ : Junction-to-Top Thermal Characterization Parameter

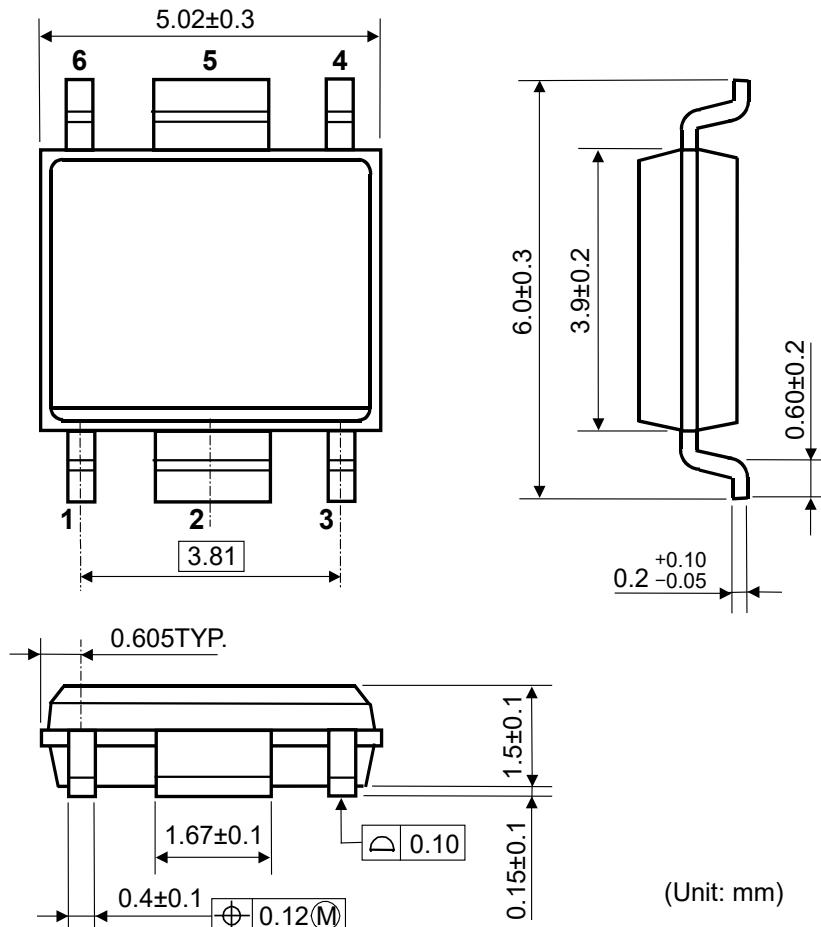

Power Dissipation vs. Ambient Temperature

## EQUIVALENT SERIES RESISTANCE (ESR) vs. OUTPUT CURRENT

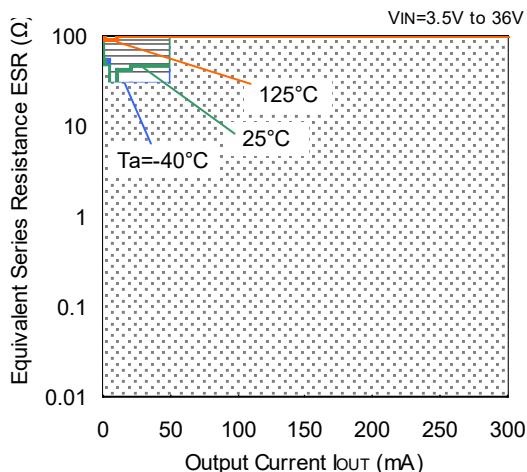

Ceramic type output capacitor is recommended for this device; however, the other output capacitors with low ESR also can be used. As for reference, the below graphs show the relationship between output current ( $I_{OUT}$ ) and equivalent series resistance (ESR). The noise level of the output current ( $I_{OUT}$ ) was measured by the test circuit and is lower than the specified value.

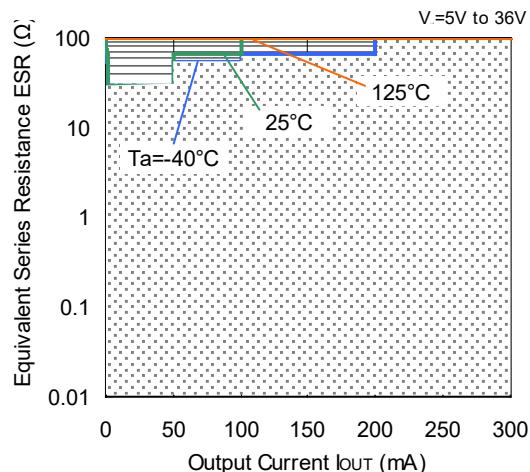

### Measurement Conditions

- Noise Frequency Range: 10Hz to 2MHz
- Ambient Temperature: -40°C to 125°C
- Shaded Area: Noise level is lower than the specified value (40µV)
- Capacitor: C<sub>IN</sub>=Ceramic 1.0µF, C<sub>OUT</sub>=Ceramic 6.8µF (C4532X7S1H685K)

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for automotive applications. Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
  - Aerospace Equipment
  - Equipment Used in the Deep Sea
  - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
  - Life Maintenance Medical Equipment
  - Fire Alarms / Intruder Detectors
  - Vehicle Control Equipment (airplane, railroad, ship, etc.)
  - Various Safety Devices
  - Traffic control system
  - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
8. Quality Warranty

#### 8-1. Quality Warranty Period

In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.

#### 8-2. Quality Warranty Remedies

When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.

Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.

#### 8-3. Remedies after Quality Warranty Period

With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.

9. Anti-radiation design is not implemented in the products described in this document.
10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
