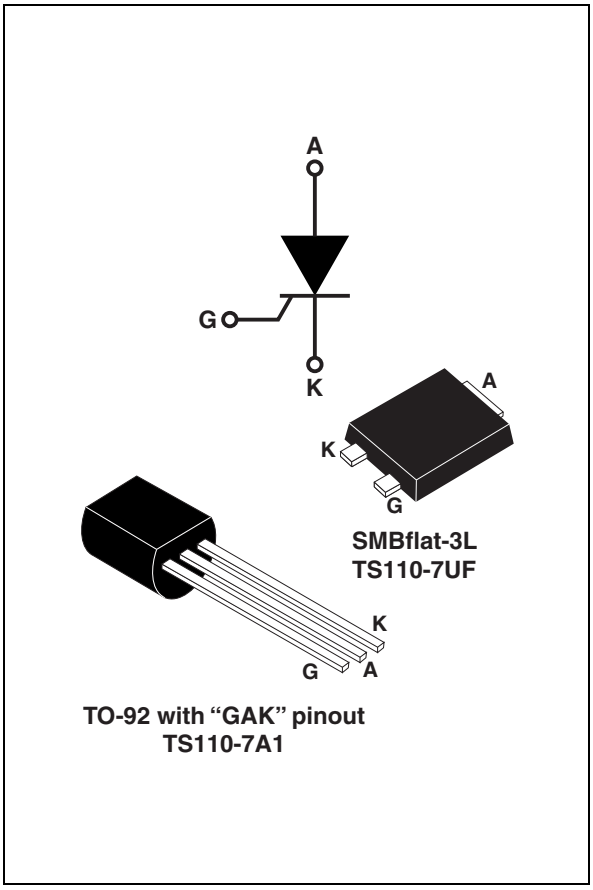
TS110-7

High surge voltage 1.25 A SCR for circuit breaker

Datasheet - production data



TO-92 with "GAK" pinout
TS110-7A1

Features

- On-state rms current, 1.25 A
- Repetitive peak off-state voltage, 700 V
- Non-repetitive direct surge peak off-state voltage, 1250 V
- Non-repetitive reverse surge peak off-state voltage, 850 V
- Triggering gate current, 100 µA

Description

Thanks to highly sensitive triggering levels, the TS110-7 series is suitable for circuit breaker applications where the available gate current is limited. Such applications include GFCI (ground fault circuit interrupter), AFCI (arc fault circuit interrupter), RCD (residual current device), and RCBO (residual current circuit breaker with overload protection).

The 1250 V surge voltage capability of the TS110-7 enables high robustness of the whole circuit breaker. The low leakage current of the TS110-7 reduces power consumption over the entire lifetime of the circuit breaker.

The TS110-7 is available in through-hole TO-92 package with GAK pinout and in SMBflat-3L.

2 AC line transient voltage ruggedness

In comparison with standard SCRs, the TS110-7 is self-protected against over-voltage. The TS110-7 switch can safely withstand AC line surge voltages by switching to the on state (for less than 10 ms on 50 Hz mains) to dissipate energy shocks through the load. The load limits the current through the TS110-7. The self-protection against over-voltage is based on an overvoltage crowbar technology. This safety feature works even with high turn-on current ramp up.

Figure 15 represents the TS110-7 in a test environment. It is used to stress the TS110-7 switch according to the IEC 61000-4-5 standard conditions. The TS110-7 folds back safely to the on state as shown in *Figure 16*.

The TS110-7 recovers its blocking voltage capability after the surge and the next zero current crossing. Such a non repetitive test can be done at least 10 times.
