

NDM3000 3 Phase Brushless Motor Driver

General Description

The NDM3000 three phase brushless motor driver consists of three N-Channel and P-Channel MOSFETs in a half bridge configuration. These devices are produced using Fairchild's proprietary, high cell density DMOS technology. This very high density process is tailored to minimize on-state resistance which reduces power loss, provide superior switching performance, and withstand high energy pulses in the avalanche and commutation modes. These devices are particularly suited for low voltage 3 phase motor driver such as disk drive spindle motor control and other half bridge applications.

Features

- $\pm 3.0A$, $\pm 30V$, 2.5W
- High density cell design for extremely low $R_{DS(ON)}$
- High power and current handling capability.
- Industry standard SOIC-16 surface mount package.

Absolute Maximum Ratings $T_A = 25^\circ C$ unless otherwise noted

Notes:

- $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JC}$ is guaranteed by design while $R_{\theta CA}$ is determined by the user's board design.

$$P_D(t) = \frac{T_J - T_A}{R_{\theta JA}} = \frac{T_J - T_A}{R_{\theta JC} + R_{\theta CA}(t)} = I_D^2(t) \times R_{DS(on)} @ T_J$$

Typical $R_{\theta JA}$ using the board layouts shown below on 4.5"x5" FR-4 PCB in a still air environment:

- 50°C/W when mounted on a 1 in² pad of 2oz copper.
- 80°C/W when mounted on a 0.027 in² pad of 2oz copper.
- 90°C/W when mounted on a 0.0028 in² pad of 2oz copper.

SOIC-16 Tape and Reel Data and Package Dimensions

SOIC(16lds) Packaging Configuration: Figure 1.0

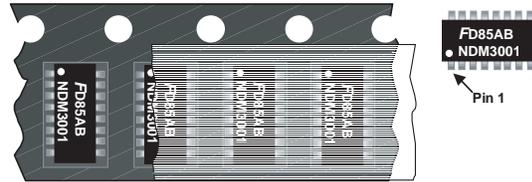

Packaging Description:

SOIC-16 parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Heat Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 2,500 units per 13" or 330cm diameter reel. The reels are dark blue in color and is made of polystyrene plastic (anti-static coated). This and some other options are further described in the Packaging Information table.

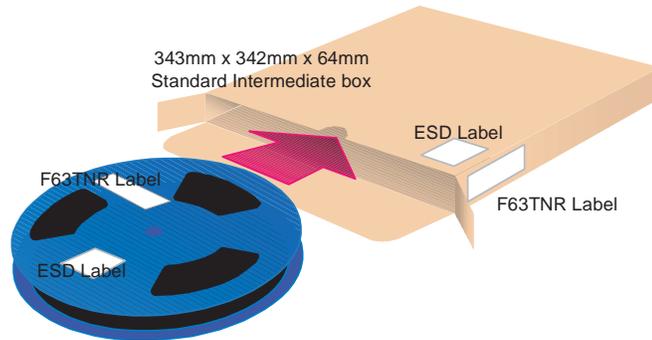

These full reels are individually barcode labeled and placed inside a standard intermediate box (illustrated in figure 1.0) made of recyclable corrugated brown paper. One box contains two reels maximum. And these boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
