

## 800 mA ultra low drop, high PSRR voltage regulator

DFN8 2x3 mm

### Features

- Input voltage from 1 to 5.5 V
- Ultra low-dropout voltage (90 mV max. @ 800 mA load)
- Low ground current (35  $\mu$ A typ. @ no load)
- Output voltage tolerance:  $\pm 2.0\%$  @ 25 °C
- High PSRR: 80 dB @ 100 Hz, 50 dB @ 1 MHz
- 800 mA guaranteed output current
- Wide range of output voltages available on request: from 0.5 V to 4 V and adjustable
- Logic-controlled electronic shutdown
- Internal current and thermal limit
- Power Good function
- Available in DFN8 2x3 mm package
- Temperature range: -40 °C to 125 °C
- Input voltage control for the ST1L08Sxx

### Applications

- Consumer
- Hard disk drives, SSD
- Computer
- Battery-powered systems
- Low voltage point of load

Maturity status link

ST1L08

### Description

The ST1L08 provides 0.8 A of maximum current from an input voltage in the range from 1 V to 5.5 V, with a typical dropout voltage as low as 70 mV.

It is stabilized with a ceramic capacitor on the output.

The very low drop voltage, low quiescent current and high PSRR features make it suitable for low power battery-powered applications.

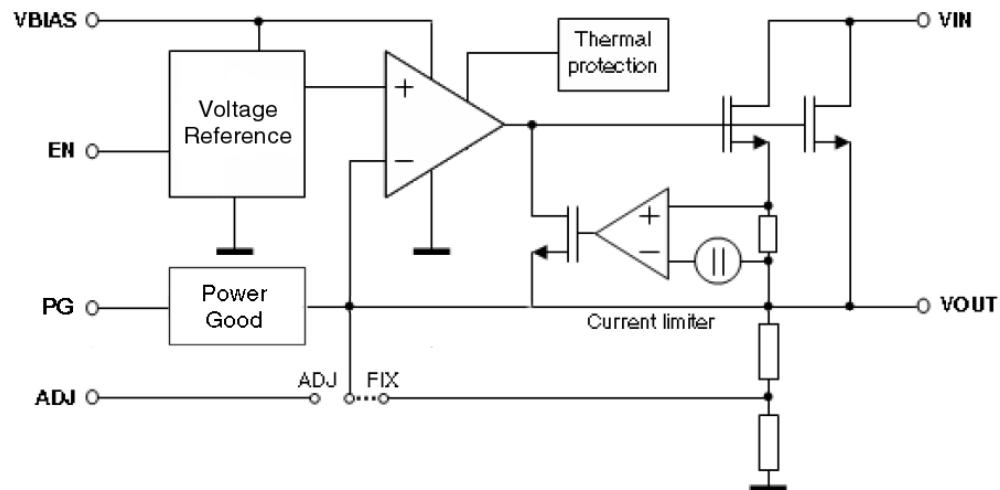

Enable logic control function puts the ST1L08 in shutdown mode, reducing the total current consumption.

Power Good function and input voltage control feature the ST1L08Sxx version.

The device is equipped with current limit and thermal protection.

## 1 Diagram

Figure 1. Block diagram

GIPD151020151423MT

## 2 Pin configuration

Figure 2. Pin connection (top view)

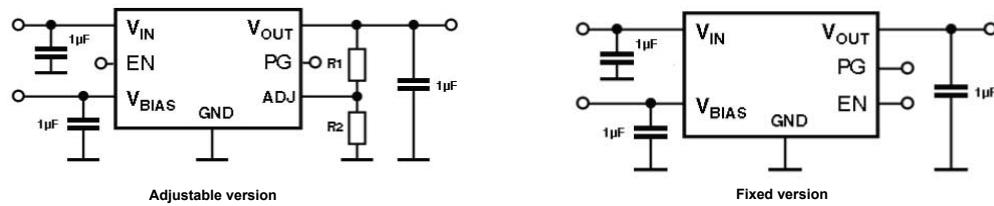

GIPD151020151427MT

Table 1. Pin description

Symbol	Function
V <sub>IN</sub>	Input voltage of the LDO (power element)
V <sub>BIAZ</sub>	Bias input of the LDO
GND	Common ground
EN	Enable pin logic input: low = shutdown, high = active
ADJ	Adjustable pin (on adjustable version)
V <sub>OUT</sub>	Output voltage of the LDO
PG	Power Good pin (not connected on the ST1L08PUR)
NC	Not connected
EXP	Exposed pad (should be connected to GND)

### 3 Typical application

Figure 3. Typical application circuits

Note: Power Good feature is not present on the ST1L08PUR.

GIPD151020151435MT

## 4

## Maximum ratings

Table 2. Absolute maximum ratings

Symbol	Parameter	Value	Unit
$V_{IN}$	DC input voltage	- 0.3 to 7	V
$V_{BIAS}$	DC bias voltage	- 0.3 to 7	V
$V_{OUT}$	DC output voltage	- 0.3 to $V_I + 0.3$	V
$V_{EN}$	Enable input voltage	- 0.3 to $V_{BIAS} + 0.3$	V
$V_{PG}$	Power Good pin voltage	- 0.3 to $V_{BIAS} + 0.3$	V
$V_{ADJ}$	ADJ pin voltage	- 0.3 to $V_{BIAS} + 0.3$	V
$I_{OUT}$	Output current	Internally limited	mA
$P_D$	Power dissipation	Internally limited	mW
$T_{STG}$	Storage temperature range	- 65 to 150	°C
$T_{OP}$	Operating junction temperature range	- 40 to 125	°C

Note:

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. All values are referred to GND.

Table 3. Thermal data

Symbol	Parameter	DFN8 (2x3 mm)	Unit
$R_{thJA}$	Thermal resistance junction-ambient	55	°C/W
$R_{thJC}$	Thermal resistance junction-case	12	°C/W

## 5 Electrical characteristics

$T_J = 25^\circ\text{C}$ ,  $V_{IN} = 1.5 \text{ V}$ ,  $V_{BIAS} = 3.6 \text{ V}$ ,  $V_{OUT} = V_{ADJ}$ ,  $C_{IN} = C_{BIAS} = 1 \mu\text{F}$ ,  $C_{OUT} = 4.7 \mu\text{F}$ ,  $V_{EN} = V_{BIAS}$ , unless otherwise specified.

**Table 4. Electrical characteristics for the ST1L08 (adjustable)**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
$V_{IN}$	Operating input voltage		1		5.5	V
$V_{BIAS}$	Operating bias voltage <sup>(1)</sup>		2.7		5.5	V

	Hysteresis			20		

1. Important: in any case  $V_{BIAS} \geq V_{OUT} + 1.5\text{ V}$ .

## 6 Application information

### 6.1 Thermal and short-circuit protections

The ST1L08 is self-protected from short-circuit condition and overtemperature. When the output load is higher than the one supported by the device, the output current increases until the limit of typically 1.8 A is reached, at this point the current is kept constant even when the load impedance is zero.

Thermal protection acts when the junction temperature reaches 165 °C typical. At this point the output of the IC shuts down. As soon as the junction temperature falls below the thermal hysteresis value the device starts working again.

In order to calculate the maximum power that the device can dissipate, keeping the junction temperature below the TOP, the following formula is used:

#### Equation 1

$$P_{D\text{MAX}} = (125 - T_{\text{AMB}})/R_{\text{THJA}}$$

### 6.2 Output voltage setting for ADJ version

In the adjustable version, the output voltage can be set from 0.5 V up to 4 V, by connecting a resistor divider between the ADJ pin and the output, thus allowing remote voltage sensing.

The resistor divider should be selected using the following equation:

#### Equation 2

$$V_{\text{OUT}} = V_{\text{ADJ}} \left( 1 + R_1 / R_2 \right), \text{ with } V_{\text{ADJ}} = 0.5 \text{ V (typ.)}$$

The resistors to be used, should have values in the range from 10 kΩ to 100 kΩ.

Lower values can also be suitable, but they increase current consumption.

### 6.3 Bias pin voltage requirements

The bias input is designed for low drop applications. The bias pin must be at least 2.7 V, and at least 1.5 V higher than the output, to ensure proper biasing to the N-channel power pass transistor.

If  $V_{\text{IN}}$  supply voltage meets these requirements, the bias pin can be tied to  $V_{\text{IN}}$ .

### 6.4 External capacitors requirements

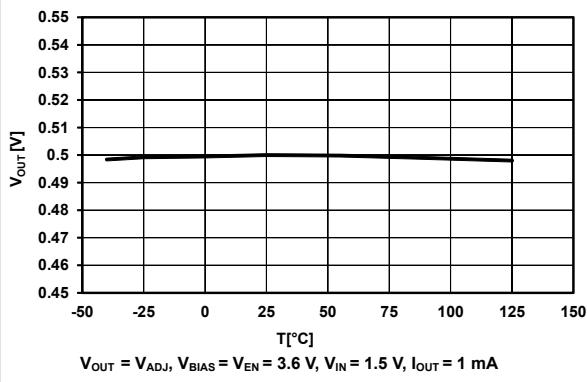

The regulator is designed to be stable with ultra low ESR ceramic capacitors on the input and the output. The suggested minimum value of the input, bias and output capacitors is 1 µF. The input capacitor must be connected as closer as possible to the  $V_{\text{IN}}$  terminal. The output capacitor must also be connected as closer as possible to the output pin.
