

Smart Lowside Power Switch For Industrial Applications

HITFET[®] ISP 75N

TAB

Data Sheet V 1.4

Features

- Lead free
- Logic Level Input
- Input protection (ESD)
- Thermal shutdown with auto restart
- · Overload protection
- Short circuit protection
- Overvoltage protection
- Current limitation

Application

- · All kinds of resistive, inductive and capacitive loads in industrial applications
- μC compatible power switch for 12 V and 24 V DC applications and for 42 Volt Powernet
- · Replaces electromechanical relays and discrete circuits

General Description

N channel vertical power FET in Smart Power Technology, protected by embedded protection functions.

Туре	Ordering Code	Package
HITFET [®] ISP 75N	on request	PG-SOT223-4

Product Summary

Parameter	Symbol	Value	Unit
Continuous drain source voltage	V _{DS}	60	V
On-state resistance	R _{DS(ON)}	550	mΩ
Current limitation	I _{D(lim)}	1	A
Nominal load current	I _{D(Nom)}	0.7	A
Clamping energy	E _{AS}	550	mJ

Figure 2 Pin Configuration

Pin Definitions and Functions

Pin No.	Symbol	Function
1	IN	Input; activates output and supplies internal logic
2	DRAIN	Output to the load
3 + TAB	SOURCE	Ground; pin3 and TAB are internally connected

Circuit Description

The ISP 75N is a monolithic power switch in Smart Power Technology (SPT) with a logic level input, an open drain DMOS output stage and integrated protection functions. It is designed for all kind of resistive and inductive loads (relays, solenoid) in industrial applications.

Protection Functions

- Note: The device provides embedded protection functions. Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operation.
- Over voltage protection: An internal clamp limits the output voltage at V_{DS(AZ)} (min. 60V) when inductive loads are switched off.
- **Current limitation:** By means of an internal current measurement the drain current is limited at $I_{D(lim)}$ (1.4 1.5 A typ.). If the current limitation is active the device operates in the linear region, so power dissipation may exceed the capability of the heatsink. This operation leads to an increasing junction temperature until the over temperature threshold is reached.
- Over temperature and short circuit protection: This protection is based on sensing the chip temperature. The location of the sensor ensures a fast and accurate junction temperature detection. Over temperature shutdown occurs at minimum 150 °C. A hysteresis of typ. 10 K enables an automatic restart by cooling.

The device is ESD protected according Human Body Model (4 kV) and load dump protected (see Maximum Ratings).

Absolute Maximum Ratings

 $T_{\rm i}$ = 25 °C, unless otherwise specified

Parameter	Symbol	Values	Unit	Remarks
Continuous drain source voltage 1)	$V_{\rm DS}$	60	V	-
Drain source voltage for short circuit protection	V _{DS}	36	V	-

¹⁾ See also Figure 9.

²⁾ Integrated protection functions are designed to prevent IC destruction under fault conditions described in the datasheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous, repetitive operation.

EMC-Characteristics

The following EMC-Characteristics outline the behavior of typical devices. They are not part of any production test.

Table 1Test Conditions

Parameter	Symbol	Value	Unit	Remark			
Temperature	T _A	23 ±5	°C	-			
Supply Voltage	Vs	13.5	V	-			
Load	RL	27	Ω	ohmic			
Operation mode	PWM DC	_		f _{INx} =100Hz, <i>D</i> =0.5 ON / OFF			
DUT specific	V _{IN} ('HIGH')=5V						

Fast electrical transients

acc. to ISO 7637

Test ¹⁾ Pulse	Max. Test Level	Test Result		Pulse Cycle Time
				and Generator
		ON	OFF	Impedance
1	-200V	С	С	500ms ; 10 Ω
2	+200V	С	С	500ms ; 10 Ω
3a	-200V	С	С	100ms ; 50Ω
3b	+200V	С	С	100ms ; 50Ω
4	-7V	С	С	0.01Ω
5	175V	E(65V)	E(75V)	400ms ; 2Ω

 $^{\rm 1)}~$ The test pulses are applied at V $_{\rm S}$

Definition of functional status

Class	Content
С	All functions of the device are performed as designed after exposure to disturbance.
E	One or more function of a device does not perform as designed after exposure and can not be returned to proper operation without repairing or replacing the device. The value after the character shows the limit.
