ALD2303A/ALD2303

DUAL PRECISION MICROPOWER CMOS VOLTAGE COMPARATOR WITH DRIVER

GENERAL DESCRIPTION

The ALD2303A/ALD2303 is a precision monolithic high performance dual voltage comparator built with advanced silicon gate CMOS technology. It features very high typical input impedance of $10^{12}\Omega$; low input bias current of 10pA ; very low power dissipation of $7.5\mu\text{A}$ per comparator; and single ($+5\text{V}$) or dual ($\pm 5\text{V}$) power supply operation.

The input voltage range includes ground, making this comparator ideal for single supply low level signal detection with high source impedance. The ALD2303A/ALD2303 can be used in connection with other voltage comparator circuits such as the ALD2301/ALD2302/ALD4302 voltage comparators. The output can be connected to a higher external voltage than V^+ .

The ALD2303A/ALD2303 is ideal for high precision micropower voltage comparator applications, especially low level signal detection circuits requiring low standby power, yet retaining high output current capability.

APPLICATIONS

- Sensor detection circuits
- PCMCIA instruments
- MOSFET driver
- High source impedance voltage comparison circuits
- Multiple limit window comparator
- Power supply voltage monitor
- Photodetector sensor circuit
- High speed LED driver
- Oscillators
- Battery operated instruments
- Remote signal detection
- Multiple relay drivers

BENEFITS

- Extremely low power and high precision combination
- Built-in high input impedance buffer
- Built-in output driver with up to 60mA sink current

ORDERING INFORMATION ("L" suffix for lead free version)

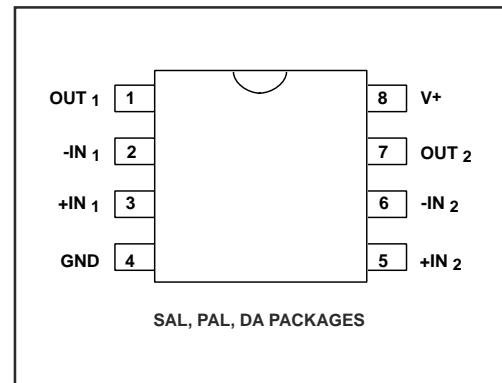

| Operating Temperature Range * | | |
|--|--|---|
| 0°C to $+70^\circ\text{C}$ | 0°C to $+70^\circ\text{C}$ | -55°C to $+125^\circ\text{C}$ |
| 8-Pin Small Outline Package (SOIC) | 8-Pin Plastic Dip Package | 8-Pin CERDIP Package |
| ALD2303ASAL ALD2303SAL | ALD2303APAL ALD2303APAL | ALD2303ADA ALD2303DA |

* Contact factory for leaded (non-RoHS) or high temperature versions.

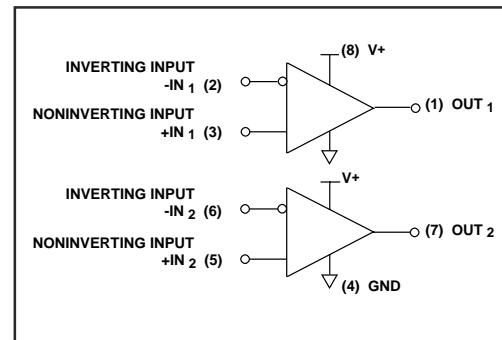

FEATURES

- 3V, 5V, and 10V supply
- Guaranteed to drive 200Ω loads
- Fanout of 30LS TTL loads
- Guaranteed maximum supply current of $20\mu\text{A}$ for each comparator
- Pinout of LM193 type industry standard comparators
- Extremely low input bias currents -- typically 10pA
- Virtually eliminates source impedance effects
- Single ($+5\text{V}$) and dual supply ($\pm 5\text{V}$) operation
- CMOS, NMOS and TTL compatible
- Open drain wired-OR outputs
- High output sinking current -- typically 60mA
- Low supply current spikes
- High gain -- 100V/mV

PIN CONFIGURATION

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS

| | |
|---|-------------------|
| Supply voltage, V+ | 10.6V |
| Differential input voltage range | -0.3V to V+ +0.3V |
| Power dissipation | 600 mW |
| Operating temperature range SAL, PAL packages | 0°C to +70°C |
| DA package | -55°C to +125°C |
| Storage temperature range | -65°C to +150°C |
| Lead temperature, 10 seconds | +260°C |

TYPICAL PERFORMANCE CHARACTERISTICS (cont'd)

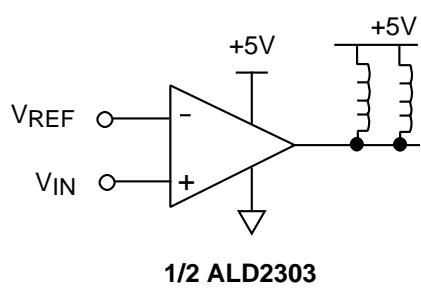

TYPICAL APPLICATIONS

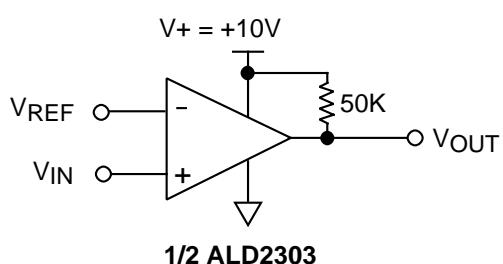

ZERO CROSSING DETECTOR

MULTIPLE RELAY DRIVE

VOLTAGE LEVEL TRANSLATOR

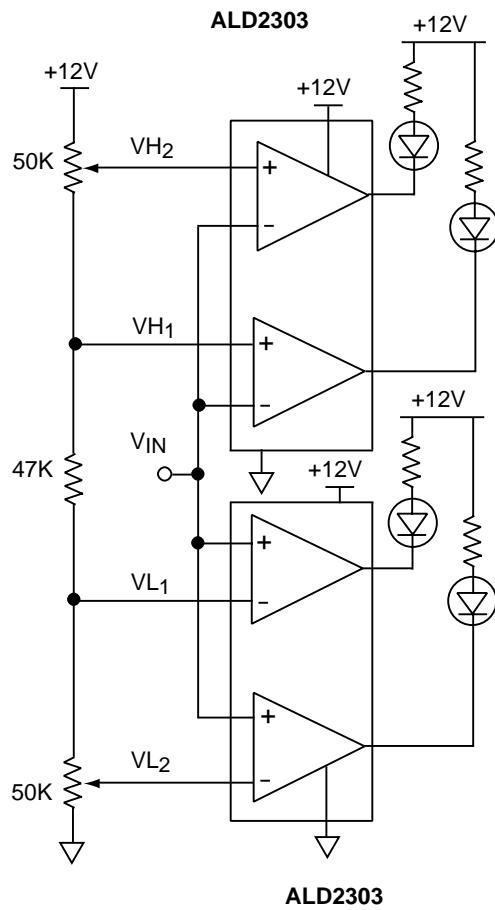

$V_{REF} = 1.4V$ for TTL input

$$V_{REF} = \frac{V+}{2} \text{ for CMOS input}$$

Output V_{OUT} swings from rail-to-rail

DOUBLE DUAL LIMIT WINDOW COMPARATOR

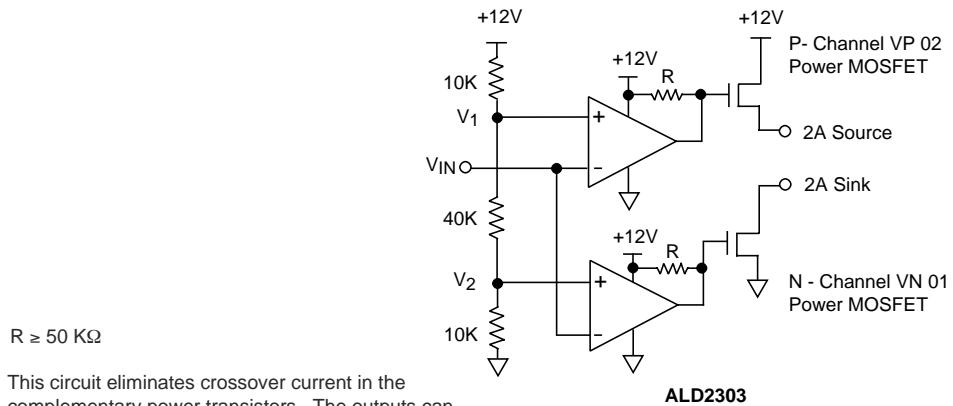

ALD2303

VL1 and VH1 first limit window send warning.
VL2 and VH2 second limit window execute system cutoff.

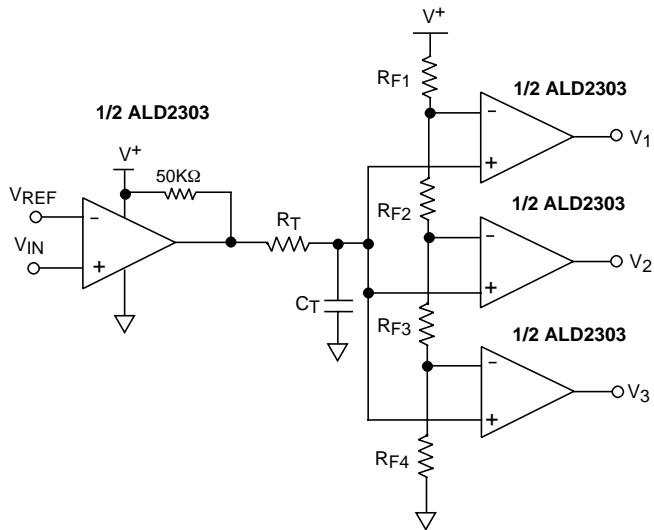

TYPICAL APPLICATIONS (cont'd)

PUSH-PULL COMPLEMENTARY POWER MOSFET DRIVER

This circuit eliminates crossover current in the complementary power transistors. The outputs can be used to source and sink different loads or tied together to provide push-pull drive of the same load.

TIME DELAY GENERATOR

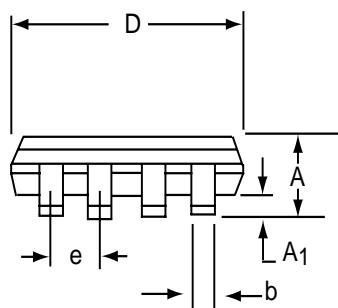

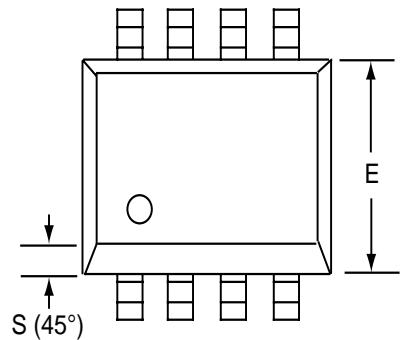

Design & Operating Notes:

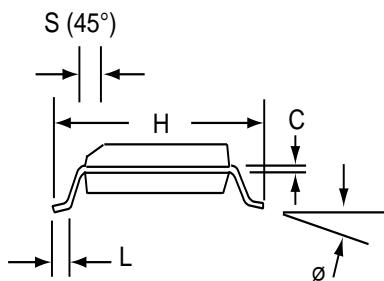

1. In order to minimize stray oscillation, all unused inputs must be tied to ground.
2. The input bias and offset currents are essentially input protection diode reverse bias leakage currents, and are typically less than 1pA at room temperature. These currents are a function of ambient temperature, and would have to be considered in applications where very high source impedance or high accuracy are involved.
3. The high output sinking current of 60mA for each output offers flexibility in many applications, as a separate buffer or driver would not be necessary to drive the intended load. However, as the circuit normally operates close to ambient temperature due to its very low power consumption, thermal effects caused by large output current transients must be considered in certain applications.
